

**IN THE CLAIMS:**

The text of all pending claims, (including withdrawn claims) is set forth below. Cancelled and not entered claims are indicated with claim number and status only. The claims as listed below show added text with underlining and deleted text with ~~strikethrough~~. The status of each claim is indicated with one of (original), (currently amended), (cancelled), (withdrawn), (new), (previously presented), or (not entered).

Please CANCEL claims 1 – 12 without prejudice or disclaimer and ADD new claims 13 – 16 in accordance with the following:

1. –12. (Cancelled).

13. (New) An e-mail client apparatus for transmitting and receiving e-mail messages, comprising:

a sorting unit which sorts e-mail messages into a hierarchical structure according to sender addresses each comprising a plurality of labels representing different levels of domain names, referring first to the label representing a top-level domain; and

a list displaying unit which displays a list comprising indicia of the labels of the sender addresses arranged in tree form, together with titles of the e-mail messages corresponding to the sender addresses.

14. (New) The e-mail client apparatus according to claim 13, wherein said list displaying unit places the label representing the top-level domain as a root node of the tree form and then attaches thereto the other labels representing successively lower levels as branch nodes.

15. (New) A method for displaying e-mail messages, comprising:  
 sorting e-mail messages into a hierarchical structure according to sender addresses each comprising a plurality of labels representing different levels of domain names, referring first to the label representing a top-level domain; and

displaying a list comprising indicia of the labels of the sender addresses arranged in tree form, together with titles of the e-mail messages corresponding to the sender addresses.

16. (New) A computer-readable storage medium storing an e-mail client program for displaying e-mail messages, the e-mail client program causing a computer to function as:

a sorting unit which sorts e-mail messages into a hierarchical structure according to sender addresses each comprising a plurality of labels representing different levels of domain

names, referring first to the label representing a top-level domain; and

a list displaying unit which displays a list comprising indicia of the labels of the sender addresses arranged in tree form, together with titles of the e-mail messages corresponding to the sender addresses.
